Mold Remediation & Photocatalytic Coating Application at Carlton Hotel

The Challenge: The Carlton Hotel has been undergoing a complete renovation. During the renovation, the owner wanted to address an area of the lower level that has had mold and odor problems for quite some time.

The Solution: The walls were cleaned with an antimicrobial cleaner. The ECI Encasement System for mold including the ECI-100 and ECI-130MR was used as a finish paint system to prevent the re-growth of mold. The ECI Photocatalytic coating system with the OXISHIELD-Primer and OXIGUARD-1.0% Finish Coat was used to provide odor-free clean air for the entire space.
