**The Challenge:** A clean room had continuous mold and mildew problems that needed to be addressed. The odors were also posing a problem for this pharmaceutical facility.

**The Solution:** The cleaning of the entire area left the walls in need of a new coating system. The ECI Encasement System was chosen and tinted to match corporate color requirements. The ECI-100 and ECI-130MR were applied. The facility was also worried about odors in this area which was extremely close to several testing and manufacturing areas. The ECI Photocatalytic System of OxiShield and OxiGuard was chosen to sanitize the room and to remove any potential odor-causing organic substances from forming.
