

104-106 Duane Street, N.Y.

The Challenge: The residential/ Commercial building had lead based paint throughout the structure and also had issues with mercury vapor entering the buildings at borderline hazardous levels. The owner wanted a solution for the lead based paint and vapor intrusion.

The Solution: The ECI FiberTech system consisting of the F-50 Penetrating Stabilizer Primer and the F-51 Sealer Coat were chosen. The lead based paint was encased and there were no readings for mercury vapor in the building after the encasement system was installed.
