

Recreation Center, Fort Meade, MD

The Challenge: The engineers at Fort Meade were looking for a long lasting coating system for the roof of the Recreation Center. They wanted a system that could be tinted to match the aged copper look that they wanted while at the same time providing a waterproof jacket over the existing seamed metal roof.

The Solution: The FiberTech encasement system was chosen. The roof was power washed with ECI's biodegradable industrial cleaner. The contractor then applied one coat of the FiberTech F-50 Penetrating Stabilizer Primer, followed by two coats of FiberTech F-51 Sealer Coat. The result is a waterproof roof system tinted to the owners desired color specifications that will last for as long as twenty years.
