

New Jersey State Planetarium, Trenton, NJ

The Challenge: The New Jersey State Planetarium had a badly deteriorated coating system. They were looking for a wear resistant, solar reflective, long-term waterproofing solution. A patch test was performed on the FiberTech Encasement System to determine its effectiveness for the application. The results were everything the Planetarium was looking for.

Patch Test

Planetarium Dome Before

The Solution: The FiberTech System was chosen. The three coat system consisting of one coat of the F-50 Penetrating Stabilizer Primer followed by two coats of the F-51 Sealer Coat provided the Planetarium with the long-term coating solution they were looking for.
