

United Methodist Church, Litchfield, CT

The Challenge: This historic Litchfield Church had loose and peeling paint on the entire exterior of the building. The congregation wanted a coating system that would stabilize the exterior surfaces of the building, would provide a waterproof membrane, and would last for at least 20 years.

The Solution: The ECI FiberTech Encasement System was chosen. The contractor applied one coat of the F-50 Penetrating Stabilizer Primer followed by two coats of the F-51 Sealer Coat. This provided the church with a waterproof coating system that will last for at least 20 years.
